### **DETAILED ACTION**

Applicant's amendments and arguments filed August 24, 2009 are acknowledged. In light of the amendments to the claims, restriction is required as set forth below. Further, Applicant has cancelled all pending claims and submitted new claims drawn only to methods of use.

#### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

#### **The species are as follows:**

Claims 20-39 are generic to the type of gene transfer- *in vivo* and *in vitro* as well as the subject population and cell type.

The claims currently embrace (1) *in vivo* and (2) *in vitro* methods of increasing the efficiency of gene transfer. Applicant is required to elect either (1) or (2).

If Applicant elects (1), Applicant is required to elect a single disease/state/condition in the subject from claims 33-35, such as ALS, heart failure, cardiomyopathy, diabetes, etc.

If Applicant elects (2), Applicant is required to elect a single cell type from tumor cells, embryonic stem cells and hematopoietic cells.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An

argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

According to PCT Rule 13.2, unity of invention exists only when the shared or corresponding technical feature is a contribution over the prior art. As presented in the Office Action of April 22, 2009, Kitazono teaches the use of FK228 (aka FR901228) to increase the efficiency of gene transfer, thus the technical feature is not a contribution over the art, and the claims lack unity.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
